

Milestone 3 - Part 2 - ThriveCart Creating Your Pages - Process Map

This process map details how to create the pages we'll need in your WordPress site. Please read this entire document and watch the tutorial video before proceeding.

[Click Here To Watch The Process Map Video](#)

Step 1. Create Your Pages

Log into your WordPress account and go to Pages in the left hand menu. Click “Add New” in the top left hand corner. Write in the Page Title (use the page names below) and click “Publish”. Once your page is published, we'll be applying our page template.

Step 2. Apply The Page Templates.

On the same screen as you were previously, click on the big green button at the top of the page that says “Launch Thrive Architect.” A separate window will open asking what page you would like to create. Chose the “Blank Page with Header and Footer” option. After choosing your page type you'll be brought to the Thrive Architect editor page. On that page click on the gear icon and choose “Import Landing Page”. Download your page template by clicking one of the links below. Then select it in the upload window. You'll get a warning that it will erase all page designs / settings. Click OK to continue. Upload the applicable page template and apply it to your page.

Repeat these two steps for the following pages:

- Home - [Download Template](#)
- Tripwire - [Download Template](#)
- Help - [Download Template](#)
- Terms - [Download Template](#)

Up next we'll be updating your header, footer & menu
