Milestone 3 - Part 9 - ThriveCart
Embed The Checkout On Your Site - Process Map

This process map details how to embed your ThriveCart checkout on your Tripwire Wordpress page. Please read this entire document and watch the tutorial video before proceeding.

Once you've finished editing your checkouts and you're sure everything is setup it's time to embed your ThriveCart Checkout on your WordPress site.

Step 1. Get Your Embed Code

Go to your Products page, find your product and click on "Get URL." From there select the "Straight into my page" option and copy the text in the box below.

Step 2. Embed The Code On Your Website

Go to your Wordpress site, find your Tripwire page and click "Edit with Thrive Architect". Once the editor loads, click on the big white box on the page (where we'll embed the checkout). In the left hand menu click on "Edit HTML content".

When the window loads, paste in the Embed Code you copied from ThriveCart and click "Save Work" in the bottom left menu.

Note: Make sure to do this with both your Tripwire page as well as your home page.

Step 3. Test Your Funnel

Once your funnel is embedded and setup correctly, go back to ThriveCart. Go to your Product List, find your product, click Edit and put it in Test Mode. Do a test purchase through your funnel to ensure everything is working correctly.
